

CASE STUDY

Oliver Hazard Perry (FFG-7) Class Equipment Harvesting Program

CLIENT SITUATION

In July of 2015, Rhoads was awarded a contract for the removal of main engines, CPP systems, shafting, propellers, rudders, main and auxiliary generator set and various engineering and electronic equipment from five de-commissioned Oliver Hazard Perry-Class Guided Missile Frigates.

RHOADS SOLUTION

The project involved successive dry dockings of the five ships as well as extensive pier-side work to remove various engineering components. Rhoads provided pier layberth, dry-docking services, engineering and auxiliary equipment removal, tank cleaning, and miscellaneous mechanical and rigging support in connection with the program designated as "FFG-7 Class Harvesting Program".

RESULT

The combined projects spanned more than eighteen months and provided US Navy active ships, US Coast Guard, and Foreign Military Sales intermediaries with a variety of highly valuable and unique pieces of equipment, which increased the readiness of US Fleet, USCG, and Allied Nation vessels.
