

## CASE STUDY

# Aryzta

### CLIENT SITUATION

Aryzta North America needed to increase its U.S. capacity to produce a product for a major fast food chain out of a New Jersey facility and sought the expertise of Rhoads. This required the addition of a new bakery space and related equipment and piping, to be completed on a tight, 6-month timeframe.

### RHOADS SOLUTION

The project began with the need to install the required CMU block walls, but this grew into a mandate to rig and install equipment supplied by three separate original equipment manufacturers, which included dough dispensing and dry ingredient systems, a fryer line and a packaging line. Rhoads also designed a palm oil system, ran an air main from the location's power house and installed over 13,000 feet of carbon and stainless steel piping to complete equipment setup and satisfy the plant's need for steam, condensate, air, potable, hot and cold water.

### RESULT

The breadth and depth of Rhoads' skilled labor was essential to completing the wide variety of tasks required in this project. After equipment setting and piping, Rhoads provided startup support to ensure a successful operation. The project was completed within the allotted budget and timeframe and has led to an ongoing relationship that continually offers opportunities for service support and new projects.
