

CASE STUDY

Genesis Energy

CLIENT SITUATION

Genesis Energy L.P., a midstream energy infrastructure and logistics services provider based in Houston, Texas, came to Rhoads to get help with vessels in its fleet. One of Genesis Energy's petroleum carrying barges and one of their tugs both sustained damage to the rear of the vessels. These issues necessitated services outside of the normal repair cycle and to avoid fleet downtime, the company requested a fast turnaround.

RHOADS SOLUTION

The work that needed to be completed included multiple piping jobs, steel repair and installing pipe hangers, in addition to blasting and painting. To satisfy all of these needs, Rhoads dry-docked both vessels, a 400-foot barge and 137-foot tug, end-to-end in our facility. We expanded our skilled labor crew to a team of more than 65 and went to work on an around-the-clock schedule, given the contract's 34-day completion requirement.

RESULT

The hard work of the Rhoads team put the barge back in service in 21 days and the tug in 29, both well ahead of the contract schedule. All required work was completed within budget. Rhoads also serviced five other vessels through pier side service during the contract period and continues to provide exceptional work for the Genesis Energy team.
